

TUBULAR GEL

VRLA BATTERIES FOR TELECOM APPLICATION

INDUSTRIAL

Exide Industries Limited, the largest manufacturer of Lead Acid Battery in India for over 60 years launches its latest series of Gel Tubular VRLA batteries ideally designed for On-Grid and Off-Grid Telecom BTS application. Exide Gel Tubular has the robustness & reliability of Tubular technology coupled with the comfort of VRLA. The performance of GTB batteries conforms to IEC 61427, IEC 60896 – 21/22 & TEC Spec No. TEC/GR/TX/BAT-003/02 MAR 2011.

APPLICATIONS : TELECOMMUNICATION • SOLAR • HYBRID POWER STATIONS • RAILWAY TRAFFIC SINGALING & LIGHTING • UPS SYSTEM

UNIQUE FEATURES	USER BENEFITS
<ul style="list-style-type: none"> Positive Plate : Robust Torr Tubular Spine with Pb-Ca-Sn alloy 	<ul style="list-style-type: none"> Rugged and reliable for cyclic application ideal for frequent discharge-charge cycle
<ul style="list-style-type: none"> Negative Plate : PbCa alloy grid Separator : Resin based Micro-porous 	<ul style="list-style-type: none"> Very low self discharge. No water topping up ever Low electrical resistance, high charging efficiency. Resistant to separator damage
<ul style="list-style-type: none"> Electrolyte : Sulphuric acid immobilized in gell form made by mixing inert additives 	<ul style="list-style-type: none"> No acid stratification, low gassing due to internal gas recombination, good heat dissipation characteristics resulting longer cycle life
<ul style="list-style-type: none"> Recharge Characteristic 	<ul style="list-style-type: none"> Excellent energy saving feature and quick recharge
<ul style="list-style-type: none"> Container and Lid : Made of high grade polypropylene co-polymer material Valve : Flame arresting vent plug housing long life rubber safety valve 	<ul style="list-style-type: none"> Low foot-print, cells are housed in stackable MS modules (8V) Explosion proof, self resealing, pressure regulating and can be safely used in high ambient temperature zone
<ul style="list-style-type: none"> Terminal : Bolt-on type with Lead-Tin coated Brass insert 	<ul style="list-style-type: none"> Specially designed to sustain high current discharge and mechanical ruggedness
<ul style="list-style-type: none"> Connector : Insulated Lead coated solid copper connector 	<ul style="list-style-type: none"> Good insulation, safety and reliability

48V SYSTEM WITH OVERALL DIMENSION

Type of Battery	Nominal Voltage Per Cell (V)	Capacity @ 10hr / 1.75V (Ah)	Dimension (with Top cover / Shroud)			Weight (kg) ± 5%
			L (mm) ± 10	D (mm) ± 10	H (mm) ± 20	
GTB 200	2	200	730	468	1410	620
GTB 300	2	300	730	517	1410	750
GTB 400	2	400	730	517	1410	825
GTB 500	2	500	730	517	1410	970
GTB 600	2	600	730	520	1685	1115

Commissioning Charge Of Battery:

Before commissioning a new battery, follow procedure.

a) Boost Charge:

At a raised voltage of volts per bank. The charging time will be 12 to 24 hours depending on the initial charge condition. The current is required to be limited to 20% of the battery Ah capacity (0.2 C10).

Boost charging must be switched off or switched over to float charging as soon as the fully charged state is reached.

b) Float Charge:

With a voltage of 2.27 volt per cell. Full capacity will however be obtained after a long period of 4 to 6 weeks depending on state of charge.

Recharging Characteristics During Operations:

Parameter	Recommended Parameters at ambient temperature 25°C	Temperature Compensation Reference 25°C
Charging Current	Maximum - 20% of the battery Ah capacity	
Float Voltage	2.27 ± 0.02 V/cell	Float : (-) 3mV/°C/2V
Boost Voltage	2.40 ± 0.02 V/cell	Cyclic : (-) 5mV/°C/2V
Equalizing Voltage	2.30 ± 0.02 V/cell	
Low Voltage Disconnect	1.85 ± 0.02 V/cell	

Performance Curves at Different Rates of Discharge

DOD Vs No. of Cycle

Go For **TORR TUBULAR**®

- Spines Cast HADI machine at 100 Bar
- Higher reliability, longer life
